

Overview

MINDFULNESS & RELAXATION

Disease and its treatment can be stressful—for you and your caregivers. Practicing mindfulness and relaxation can help calm your mind, reduce stress, and sharpen your ability to focus.

Material is adapted from the National Cancer Institute, but it applies to the stress of dealing with any disease.

MINDFULNESS OVERVIEW

Mindfulness is slowing down to pay attention to what's going on right here, right now. Some of the benefits of mindfulness are that it:

- Reduces stress, anxiety, and depression
- Increases positive emotions and enjoyment in daily life
- Encourages healthier eating habits
- Improves relationships
- Reduces parenting stress

- Helps people quit smoking

Take a Quiz: What's Your Stress Level?

Take this quiz to find out how much stress you have been dealing with lately.

PROGRAMAS DE ATENCIÓN PLENA

Meet Aileen Moreno, LCSW

Aileen Moreno is a Psychometrician at the Miami Cancer Institute of Baptist Health South Florida. Aileen works with cancer patients and survivors of all ages who are referred for neuropsychological testing to assess for cancer-related cognitive impairment. Aileen is also the mindfulness meditation and visual guided imagery trainer/facilitator for patients receiving psycho-oncology care.

Aileen has previously worked as a medical social worker in the hospital setting and as the Bilingual Operations Manager for the National Cancer Institute's Cancer Information Service and Smoking Quitline. Aileen is a licensed clinical social worker in the State of Florida. She holds a Bachelor's degree in Psychology and a Master's degree in Social Work from Florida International University.

Mindfulness Strategies

Practicing mindfulness involves breathing methods, guided imagery, and other practices to relax the body and mind and help reduce stress.

ENJOY SIMPLE PLEASURES

In our busy world, it can be hard to slow down and notice the little things. Here are a few ways to use mindfulness to stop and smell the roses.

Love Your Favorite Things

Eat your favorite food. Turn off the TV, place the food in front of you, look at it, taste it, and smell it. Enjoy it!

Listen to your favorite song—or any music that you love!

Take a Journey in Your Mind

Think of yourself at the beach or in a garden or the mountains—anywhere you want. Close your eyes and think about what it would feel like to be there right now. Enjoy every little thing about this beautiful place!

Take a Walk Outside

Walk slowly and really focus on being there. Notice what you see, hear, and smell.

BE MINDFUL THROUGH STRESS AND BAD FEELINGS

Sometimes we have thoughts that make us feel sad or stressed. Practicing mindfulness can help you work through these feelings.

Practice Self-Reflection

It's easy to let negative thoughts spiral out of control. When you are having negative thoughts or feelings, follow these five steps:

- Stop and take a deep breath.
- Ask yourself, what's really going on here?
- Remind yourself that your thoughts are "just thoughts." Thoughts come and go. We all have thoughts, but having a thought doesn't mean that it's true or that it will last forever.
- Take another deep breath and move on with your day.
- Do something nice for yourself. Go for a walk, take a bath, paint your nails, call a friend, go to a movie, or play with a child or a pet. Do whatever feels good to you.

ACCEPT YOURSELF AND OTHERS

Do you ever notice that you're harder on yourself than you are on other people? Try to give yourself a break and treat yourself like you would treat a good friend.

Do you ever notice that you're harder on yourself than you are on other people? Try to give yourself a break and treat yourself like you would treat a good friend.

Practice Self-Compassion

Whenever you're being hard on yourself, try to be a little kinder with these three steps:

- Think about a time when things did not go the way you wanted, or a time when you felt like you said the wrong thing or messed up somehow. How did you feel? What were you telling yourself?
- If this same thing happened to your closest friend, what would you say to them?
- Even if it feels silly, try saying those things to yourself. Self-compassion means treating yourself like you would treat a good friend.

TAKE TIME FOR MINDFUL MOMENTS

Take some time to do something that you enjoy, like a hobby. You'll have something else to think about instead of worrying about your disease.

Slow Down and Breathe

A great way to start practicing mindfulness is to set aside time (even 1 minute!) to slow down and breathe.

Find a quiet spot where you can be by yourself for a few minutes.

Sit down, take a deep breath, and close your eyes. Notice your breath.

At some point (usually pretty quickly), other thoughts will pop up in your mind. That's ok! Just bring your attention back to your breath.

Focus on your breathing, right here, right now.

Relaxation Overview

Many people have found that practicing relaxation techniques has helped them cope with stress and feel less anxious during diagnosis, treatment and healing. Try learning and practicing relaxation techniques to lower your stress.

PRACTICE RELAXATION TECHNIQUES

Set aside about 5 to 10 minutes a day, if possible, to practice one or more of these relaxation exercises. You also may be able to do them during a stressful time, such as during a medical test or treatment.

Connect With Your Body's Relaxation Response

Take some time to let go of tension and clear your mind with this relaxation exercise.

Lie comfortably on your back or find a comfortable and quiet place to sit.

Close your eyes and breathe gently and naturally through your nose.

Relax all your muscles, starting at your toes and moving up to the top of your head.

Focus on your breathing.

Continue for 5 to 20 minutes.

When you are done, sit quietly for several minutes, at first with your eyes closed and then with your eyes open. Wait a few minutes before standing up.

Practice Deep Conscious Breathing

Deep breathing can help keep stress in check. This exercise can be done with your eyes closed or open wherever you happen to be.

Find a comfortable and quiet place to sit or lie down.

Relax your face, jaw, neck, and shoulders. Gently place one hand on your chest and the other hand on your belly button.

As you breathe in, allow the breath to expand your belly, chest, and lungs. As you breathe out, gently press your hands against your chest and belly to let out more air.

Focus on steady breathing.

Take your time.

Try Progressive Muscle Relaxation

Progressive Muscle Relaxation shows you how to relax your muscles through tension and release. This can help lower your overall tension and stress levels, and help you relax when you are feeling anxious. Practicing this exercise will help you learn what relaxation feels like, and to notice when you get tense during the day.

Plan to take about 15 minutes to do the exercise.

Find a quiet place where no one will disturb you.

First, apply muscle tension to a specific part of the body. Take a slow, deep breath and squeeze the muscles as hard as you can for about 5 seconds.

After about 5 seconds, quickly relax the tensed muscles. Exhale as you let all the tightness flow out of the tensed muscles. The muscles should feel loose as you relax them. It's very important for you to notice and focus on the difference between the tension and relaxation.

Stay relaxed for about 15 seconds, and then do the same thing for the next muscle group. Once you've gone through all of the muscle groups, take a moment to enjoy the relaxation.
